I am a total novice with the sculpting tools. I am using Photoshop CC 2015 and Autodesk Maya 2016. I have a model and the other half of the process is pretty much done but I am facing a problem. I have created the wireframe for the body using the "Sculpt Extrude" tool. I have found the "Build from selected mesh" tool for creating the mesh but I am seeing some unexpected results when I try to use it. To demonstrate the problem I have attached a screen shot here along with a video clip at the end of the process. In the video at 1.5 sec I can see one of the dimensions not fitting into the body. I tried to fix that in a separate photo editing application but that didn't work. I have tried to solve this in two ways. The first is to check if this can be solved simply with the "scale by" value and scaling up every dimension of the model by the same factor. But the scale is not keeping the proportions correct so I had to go for the second method. The second method was to find where the problem is and then try to fix that. I couldn't find any option for fixing just that particular dimension. I would like to ask if any of you could give me some feedbacks on where I am going wrong in these methods? The video clip is at A: This is not a valid 3d mesh. You have some values for Length, Width, and Height and no values for width of the 3da54e8ca3
