Made using the Google 3D Builder. Built using HTML5, CSS3 and JavaScript. Photorealistic & seamless tessellation in real-time Virtual Table presents a unique menu that can be embedded in any website, allowing website owners to create and customize their own virtual table. For example, this application can be used to show book or movie reviews or collect interesting data about data such as a sports team's statistics. With Virtual Table one can create a tailored restaurant menu or a poster for a school project, and with a pinch of imagination almost anything is possible! 'Web-embedded' means that the table is displayed in the browser (on mobile devices, tablets and desktops) and not downloaded on the user's computer. Thanks to the 'Web-embedded' feature, Virtual Table is the perfect virtual table solution for small websites, even if they don't have very large display screens. The application comes with a large number of visual customization options, including a unique semi-transparent overlay that can be created to change the transparency of the table items, colors and fonts, as well as the number of column displays. As the table is rendered in real-time, the main dimensions of the table don't change when items are added or deleted. The user can choose between several HTML5 table solutions - both classic HTML tables and tabular data - and all the data is automatically formatted. 'Clickable'

means that each item in the table is clickable, which allows the user to navigate the table items by simply clicking on them. The scrollbar can be enabled or disabled as needed. 'Active links' means that the links are highlighted in the table, so the user can navigate from one item to another by simply tapping on them. Virtual Table is an easy to use application,
