Q: Cannot export images to OneDrive using the REST API I am trying to export images to my OneDrive using the REST API. The API is written by Microsoft themselves and is available here. I am using the following piece of code. Code: `HttpClient httpClient = new HttpClient(); HttpResponseMessage response = await httpClient.PostAsync("", new StringContent(Encoding.UTF8.GetBytes("..."), Encoding.UTF8, "image/jpeg"));` I am getting the following error. `System.Net.Http.HttpRequestException: An error occurred while sending the request. ---> System.Net.Http.WinHttpException: An operation was attempted on something that is not a socket.` Note: The error is only shown when the file I am trying to upload is bigger than 16MB. The same piece of code works when the file is less than 16MB. I have a few questions: 1. What is this error message saying? 2. Is this a server side error or I am doing something wrong? 3. Is there a way to check whether or not a limit has been exceeded? A: It looks like the documentation you are trying to use is misleading. I was able to reproduce the error on the API you are linking to. It works if I use the code below. `httpClient = new HttpClient(); httpClient.DefaultRequestHeaders.Accept.Add(new MediaTypeWithQualityHeaderValue("application/json")); httpClient.DefaultRequestHeaders.Authorization = new AuthenticationHeaderValue("Bearer", "Bearer token");`
