The Photoshop program is available on multiple platforms, including Macs, PCs, and more. You can create and edit your own images with Photoshop on your personal computer, or you can get a copy through a network. The software is usually freely distributed as a way to teach the new features of a new program. You can purchase separate image files from the graphic design industry, which can be scanned into Photoshop. To create your own Photoshop files, you can purchase a copy (see the next section), or you can download the free trial version of Photoshop from the Adobe web site. In Photoshop, you can save images as TIFF or PSD files, which offer the highest quality images. A Photoshop file is an Adobe Photoshop Extended file (found in the Adobe Creative Cloud program), and it has two special types of layers: Adjustment Layers and Mask Layers. A TIFF file is an uncompressed file that is ideal for your photographs, whereas the PSD file is compressed and compressed well. Here's the short version of the differences between the two: TIFF: You can open a file in either Windows or Mac versions of Photoshop. You can open and save a compressed file without having to open it. PSD: You can open a file in either
